DETAILED ACTION

Response to Amendment

The applicant's amendment, received 6-20-2006, overcomes the examiner's prior art rejection. Hence claims 1-9, 11-14, 16-20 and 22-24 are allowed while claims 10, 15 and 21 were cancelled.

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

1. As can be seen from the amended independent claims, the newly added matter is not found in the prior art and one skilled would not be motivated to combine art to arrive at this particular design:

such that each transmitter module emits a characteristic transmission pattern having a sequence of burst transmissions that occur at pseudo-random times,

wherein the transmitters of the transmitter modules emit transmission signals in burst transmissions that are characterized by a low cross correlation, so that there is a low probability of transmitting burst transmissions at the same time, and

wherein a the characteristic transmission patterns of the transmission transmitter modules is already known to the receivers, receiving and signal processing network, and after each burst transmission from a transmitter module is received by the receivers, the receiving and signal processing network calculates a search range for each receiver during which the next burst transmission of the characteristic transmission pattern of the same transmitter module is expected to arrive, the search range having a duration that is substantially longer than the duration of the burst transmissions.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
